Civil litigation system

1 The court system

What is the structure of the civil court system?

The Japanese judicial system is a three-tiered court system comprising one Supreme Court, eight High Courts (and six branches and one special branch for intellectual property) and 50 district courts (and 203 branches). Apart from these, there are 438 summary courts. Pursuant to constitutional restrictions, Japan has no special courts in principle.

In civil actions, the amount to be claimed determines which court has jurisdiction. The district courts have jurisdiction of first instance over proceedings where the amount claimed exceeds ¥1.4 million. Proceedings in respect of lesser amounts claimed are conducted by the summary courts as the courts of first instance. As to the appeal courts, see question 32.

2 Judges and juries

What is the role of the judge in civil proceedings and what is the role of the jury?

In civil actions, the court system is adversarial, wherein, fundamentally, judges render judgment based on claims and evidence that are prepared and submitted by the parties. However, certain requirements for suits, such as capacity to be a party in a civil action and legal capacity, which entail a high degree of public interest, are ascertained by judges, exercising their own authority. For all other issues, judges can take into consideration all evidence and any other matters submitted to, and recognised by, the court and have the freedom to make findings of fact. In addition, judges lead the court proceedings and marshal the issues. Under these conditions, judges who make the final judgment in the case can encourage the parties to settle the case at any stage of the proceedings, and sometimes make a settlement proposal themselves.

Most judges in Japan are 'career' judges, who choose to become a judge shortly after the mandatory vocational legal training, with the exception of some Supreme Court judges (who are selected from among other legal experts such as professionals or bureaucrats) and other recent exceptions.

In civil actions of first instance, generally a single judge hears and determines a case, but in complicated cases or for other reasons, judges can decide that the case should be heard and determined by a panel consisting of three judges. Such decision can be made even in the middle of the proceedings.

There is no jury system for civil actions.

3 Pleadings and timing

What are the basic pleadings filed with the court to institute, prosecute and defend the product liability action and what is the sequence and timing for filing them?

The plaintiff submits its complaint to the court. A complaint must indicate the name of the parties, the object of claim and the cause of action. It is also required that the plaintiff stipulate the fundamental facts that support its claim and important ancillary facts relevant to the fundamental facts and evidence. Copies of important evidence are to be attached to the complaint. The plaintiff also must identify the amount of claim in the complaint (although increasing or decreasing

the amount of the claim in the later stages of the proceeding is possible) and pay the court fees corresponding to the amount of claim (generally, the court fees are paid by attaching a documentary stamp to the complaint). The court fees are prescribed by law and are nationally uniform; for example, for a claim of ¥10 million, the court fee to bring a lawsuit at first instance is ¥53,000 and for a claim of ¥100 million, the court fee to bring a lawsuit at first instance is ¥320,000.

After reviewing the complaint for conformity with court requirements, the court will serve the defendant with a copy of the complaint and the evidence, and a summons to appear before the court on a prescribed day.

The defendant on whom the complaint is served must in principle submit its answer to the complaint, in which the defendant states whether it admits or denies each of the plaintiff's allegations and states its rebuttals. Generally, the answer should be submitted one week prior to the first hearing date designated by the court; however, in practical terms, because of time constraints for preparation, especially in the case where the defendant retains attorneys after the service of complaints, it is usual for the defendant to submit a brief answer with a statement of general denial and later to submit a supplemental brief with substantial arguments prior to the second hearing date.

4 Pre-filing requirements

Are there any pre-filing requirements that must be satisfied before a formal law suit may be commenced by the product liability claimant?

No. While certain kinds of actions, such as divorce, require mandatory mediation, there are no pre-filing requirements with respect to ordinary civil actions, including product liability actions.

5 Summary dispositions

Are mechanisms available to the parties to seek resolution of a case before a full hearing on the merits?

There is no mechanism similar to a summary judgment motion or a motion to dismiss.

Parties can seek dismissal over non-fulfilment of the requirements for bringing a valid civil action, such as jurisdiction, standing to sue or to be sued, an enforceable legal interest; however, generally, these are not motions that are made separately; rather, they are discussed in the same briefs that argue the merits. Courts may dismiss a case because of the non-fulfilment of such requirements without determination on the merits, but such determination is also generally made in a regular judgment, without special proceedings. On the other hand, the court may render its decision on issues during the course of litigation (prior to the final judgment) in its discretion (interlocutory judgment). While interlocutory judgments may be given not only with respect to the aforementioned requirements for actions but also on part of the merits, the use of such judgments is not frequent.

6 Trials

What is the basic trial structure?

Oral proceedings usually begin within a month or so of the filing of complaints.

Usually, a party files a brief setting forth its factual and legal arguments and the facts pertinent to those arguments, together with supporting evidence, with the court one week prior to the hearing date. The court reviews the arguments and may ask questions to be clarified at a hearing or a preparatory hearing (which is non-public). The other party then files its rebuttal or supplemental arguments in writing. These proceedings are usually held at intervals of about one month or more.

When the court is satisfied that the allegations made by the parties and the proof presented are exhaustive and the issues have been clarified, the court holds examinations of witness or the parties themselves, or both, in open court. Then the parties exchange final briefs and the court renders judgment.

As such, there is no distinction between trial and pretrial phases of a lawsuit.

Further, as stated in question 2, the judge may encourage the parties to settle the case at any stage of those proceedings; usually, such encouragement is made following disclosure, to some extent, of the judge's impression, before or after the examination.

7 Group actions

Are there class, group or other collective action mechanisms available to product liability claimants? Can such actions be brought by representative bodies?

Currently, there is no special group action system. Previously, civil actions have at times been conducted by the counsel team method, in which a team of lawyers collectively represents a group of plaintiffs.

However, The Act on Special Provisions of Civil Procedure for Collective Recovery of Property Damages by Consumer (Law No. 96 of 2013) (the Japan Collective Action Act) will come into force on 1 October 2016. The Japan Collective Action Act introduces opt-in consumer collective actions, which can only be brought by specific certified consumer organisations certified by the prime minister and not by individual consumers. The proceedings consist of two stages; the first stage is to confirm the common liabilities and the second stage is to determine the claim of each opt-in consumer. In addition, the new system severely limits the scope of claims that may be subject to the lawsuits, and compensatory claims based on the Product Liability Act of Japan (the PL Act) are out of scope.

8 Timing

How long does it typically take a product liability action to get to the trial stage and what is the duration of a trial?

The average length at first instance, from the acceptance of the case by the court to the final judgment or settlement is ordinarily 9.2 months, and 13.4 months for compensation actions, which include product liability claims (Judicial Statistics for 2015); although, since the Japanese system does not distinguish between trial and pretrial stages, it is difficult to tell how long it will take to arrive at the trial stage.

However, the conduct of cases varies widely in length because the parties are generally allowed to make arguments as exhaustively as they wish, while settlement proceedings can be conducted several times and prolong the overall timings. Product liability actions often require technical knowledge, involving complexity, and therefore can take longer than the average.

Evidentiary issues and damages

9 Pretrial discovery and disclosure

What is the nature and extent of pretrial preservation and disclosure of documents and other evidence? Are there any avenues for pretrial discovery?

There is no procedure similar to pretrial discovery or disclosure procedures pursuant to which each party is required to disclose documents and witnesses per the other party's requests, for the purpose of properly preparing for trial. Therefore, parties generally need to prepare for litigation based on the evidence at hand. However, there are several methods to obtain evidence, as follows.

Before the commencement of litigation

Preservation of evidence

Each party can make a motion for preservation of evidence and the courts may grant the motion in the case where there are circumstances where it would be difficult to examine evidence unless preservation of evidence prior to the litigation is conducted (eg, where it is likely that the custodians of the evidence would falsify it). The court may take and preserve evidence, documentary or otherwise (eg, testimony of witnesses, expert opinion). Although this procedure is utilised for preservation of medical records in medical cases, it is not frequently used in other areas, including product liability actions.

Request for information via a bar association

An attorney may request a bar association to request public offices or public or private organisations to provide information to the bar association based on article 23.2 of the Attorney Act (Act No. 205 of 1949). This procedure is often used for collecting evidence; however, the requested organisations sometimes refuse to disclose information that may contain personal information.

Measures prior to bringing a lawsuit

A party who sends an advance notice of filing an action can make inquiries to the person who is to be the defendant, with regard to issues to be raised in the future lawsuit, within four months of the advance notice. The recipient of the advance notice can make inquiries to the sender for the purpose of preparation for the possible lawsuit. This is not often used. In addition, the sender or the receiver of the advance notice may, in the case where it is difficult to collect evidence, file a petition with the court to request public officials or public or private organisations to report about certain facts, provide an expert evaluation, submit documents, send items of property, etc, and the court may rule in favour of the petitioner after hearing the opposite party's opinion.

After the commencement of litigation

In addition to the above, the following methods are available.

Inquiry to opponent

A party makes inquiries in writing to the opponent with regard to the issues to be raised in preparing its claims or in supporting its arguments. However, this procedure is currently not often used because there is ample scope for the opponent to refuse to respond and there is no sanction in the case of refusal, even if the opponent party is obliged to respond.

Petition for commission of examination

A party may file a petition to the court to request public officials or public or private organisations to report about certain facts, provide expert evaluation, submit documents, send items of property, etc. Notwithstanding the absence of any obligation to submit, the court may grant the petition if it considers that the petition is reasonable, and the target organisation will generally comply with the decision on a voluntary basis.

Motion to produce documents

Where a party makes a motion to produce documents, the court may order the other party or a third party to produce such documents or a part of the documents (including drawings, photos and videotapes). The said other party or the third party may be sanctioned if refusing to comply with the order. The petitioner must prove:

- (i) that the party that is the object of the production or the third party has custody of the requested documents;
- (ii) the necessity of examining the evidence; and
- (iii) that the custodian has a legal obligation to submit the evidence (eg, the documents were not prepared mainly for internal use).

With regard to (i) above, the petitioner must identify specific documents, rather than broader categories of documents.

10 Evidence**How is evidence presented in the courtroom and how is the evidence cross-examined by the opposing party?**

Evidence is categorised as written documents, witness and party testimony, observation and expert evaluation.

In principle, written documents are submitted by each party. In addition, certain documents may be collected and examined by the court through the methods stipulated in question 9.

Witness and party testimony is given in a public courtroom in the presence of the presiding judges in charge and each party and its counsel. In principle, first, the party who called the witness or parties themselves conducts direct examination; then the other side conducts cross-examination; and then the former party conducts redirect examination. The other side may conduct further cross-examination when permitted by the judges. After the parties conduct the examination, judges can put questions to the witnesses or the parties themselves. The examination is generally concluded in less than one day unless the case is complex. Prior to the examination, the parties must file a motion to call a witness or for party examination, which states the main topics of the testimony, and in practice, the witness or the party to be examined submits his or her written testimony.

11 Expert evidence**May the court appoint experts? May the parties influence the appointment and may they present the evidence of experts they selected?**

Judges may appoint a third party with expertise to supplement their knowledge or decision and have the expert report its opinion or judgment in writing or orally. The expert is appointed by the judges only after a party files a motion for evaluation by an expert, and the judges may not exercise discretion to appoint an expert, with certain exceptions.

In addition, the judge may appoint an expert commissioner, upon hearing the parties' opinions as to the appointment. The expert commissioners play the role of adviser to the judges and explain issues requiring expertise to the judges. However, in contrast to the expert mentioned, the expert commissioner only helps the judges to understand the arguments or the evidence and their explanation is not to be considered as evidence. Expert commissioners are used mainly in technical cases such as IP cases, medical cases and construction cases and are not often used in product liability cases.

12 Compensatory damages**What types of compensatory damages are available to product liability claimants and what limitations apply?**

Generally, damages flowing from a causal relationship, under tort, breach of contract or defective product are available. In other words, damages are only available if there is a causal relationship regardless of the type of the damage (eg, actual damage, lost profits, damages for mental distress, and possible future damage). However, actions based on the PL Act are to be brought only when the consequential loss (ie, damage other than that damage to the defective product itself) is caused.

13 Non-compensatory damages**Are punitive, exemplary, moral or other non-compensatory damages available to product liability claimants?**

No punitive, exemplary, moral or other non-compensatory damages are available.

Litigation funding, fees and costs

14 Legal aid**Is public funding such as legal aid available? If so, may potential defendants make submissions or otherwise contest the grant of such aid?**

Claimants suffering economic hardship, whose earnings are less than a certain amount and who can prove that it is 'not impossible' to win the

case, may receive public legal aid from the Japan Legal Support Centre (JLSC).

In addition, when a consumer may suffer damage from the business activities of businesses and the consumer brings a lawsuit against the business or the business brings a lawsuit against the consumer, under certain requirements, the consumers may receive a financial accommodation and other legal aid from local government (eg, Ordinance of Consumer Affairs of Tokyo, article 31).

15 Third-party litigation funding**Is third-party litigation funding permissible?**

While there is a discussion as to whether it is acceptable from an ethical viewpoint, there is no law that directly regulates funding from a third party.

16 Contingency fees**Are contingency or conditional fee arrangements permissible?**

Currently, attorneys' fees are not regulated by law. Therefore, Japanese lawyers are not prohibited from receiving contingency fees and many firms have fee systems that are a mixture of both engagement fees and contingency fees, although pure contingency fee arrangements are rarely used.

17 'Loser pays' rule**Can the successful party recover its legal fees and expenses from the unsuccessful party?**

Generally, legal fees including attorneys' fees are not borne by the losing party and each party bears its own attorneys' fees. However, in tort cases, in practice the court grants a certain portion of attorneys' fees in the form of damages, which is an additional amount equivalent to about 10 per cent of the damages awarded.

On the other hand, expenses such as court fees, postal costs for service, etc, and per diem allowances, travel expenses and accommodation expenses for witnesses, experts and witnesses are generally to be borne by the losing party. The portion of expenses to be borne by each party is stipulated in the judgment. However, in order to determine the specific amount, the winning party must file a separate petition, which is rarely done in practice.

Sources of law

18 Product liability statutes**Is there a statute that governs product liability litigation?**

The PL Act, which is a special law of the Civil Code, came into force on 1 July 1995.

Under the Civil Code, a person who has suffered harm has to establish that the manufacturer intentionally or negligently caused the harm or manufactured or sold a defective product. On the other hand, under the PL Act, if the injured person establishes that 'Manufacturers Manufactured Defective Products (except for land, buildings or services) and such Products caused the harm' (each of the capitalised words was defined in the PL Act), and such products caused the harm, without establishing intention or negligence of the manufacturers, the party will be awarded damages. However, there is no reduction in or transfer of the burden of proof in respect of the other factors, such as a causal relationship between the defect in the product and the harm, and the existence of the harm; and these must be established by the injured party. In addition, the PL Act is not applicable in the case where damage was caused only to the product itself; it is only applicable to the case where there is other resulting harm: bodily injury or loss of life; or damage to other property. The statutory limitation period is three years from the time of knowledge of the defect and ten years from delivery of the product (with respect to liability in tort, three years from the time of knowledge of the tortious act and 20 years from the occurrence of the act).

19 Traditional theories of liability**What other theories of liability are available to product liability claimants?**

General tort liability, liability in respect of contractual obligations, if any, defect liability and liability in breach of contract are available.

20 Consumer legislation**Is there a consumer protection statute that provides remedies, imposes duties or otherwise affects product liability litigants?**

Other than the compensatory damages stated above, no other special remedies directly applicable to the persons who have suffered harm are available.

Several administrative regulations are applicable depending on the type of product, such as the Food Sanitation Act, the Road Transport Vehicle Act, Pharmaceuticals and Medical Devices Act, the Electrical Appliances and Material Safety Act and the Consumer Products Safety Act. What kind of duties may be imposed varies under each Act. Taking as an example the Consumer Products Safety Act, which covers many products that consumers can purchase in the market, in situations where a manufacturer acknowledges that a serious accident such as death, serious injury, carbon monoxide poisoning or fire accident resulting from a defect in a consumer product occurs, the manufacturer shall notify the Secretary General of the Consumer Affairs Agency within ten days of the manufacturer's becoming aware of the matter. The Consumer Affairs Agency then announces the name of the manufacturer and gives an outline of the accident and other information. If the manufacturer fails to report or makes a false report, the Secretary General of the Consumer Affairs Agency orders the manufacturer to establish a system to collect accident information, etc, and if the manufacturer violates such order, the manufacturer may be sanctioned by way of no more than one year's imprisonment or a fine of less than ¥1 million. In addition, the Secretary General of the Consumer Affairs Agency may order the manufacturer to report the facts and may enter its offices to investigate. Pursuant to the applicable laws, manufacturers may be ordered to recall products.

A manufacturer's failure to take these measures does not necessarily lead to liability or make it answerable in civil actions including product liability cases; however, there is a precedent that recognises that a seller's failure to take necessary measures at the appropriate timing may constitute a tort. In this regard, it is possible that a manufacturer who fails to take necessary measures at the appropriate time can owe liability under tort or breach of contract.

21 Criminal law**Can criminal sanctions be imposed for the sale or distribution of defective products?**

As stated above, in relation to regulations, manufacturers may impose criminal sanctions in the event they do not comply with the orders of authorities.

Other than that, if a company manufactures or sells defective products, which cause serious injury or loss of life, the person in charge of manufacturing or selling or the directors of the company, rather than the company itself, may face criminal charges upon death or injury caused by negligence in the conduct of business (the punishment for which is imprisonment of up to five years or a fine of up to ¥1 million). There have been several examples where such criminal liability was actually imposed on directors or employees; however, generally speaking, prosecutors prosecute only malicious cases such as where there was grave harm and the company left the problem unsolved while knowing of the defect.

22 Novel theories**Are any novel theories available or emerging for product liability claimants?**

There is no novel theory available or emerging.

Update and trends

Recently, some product liability defects in respect of cosmetic products have caused serious health issues to many users and such issues have made headlines. In the past five years, lawsuits to pursue liability of the manufacturers or sellers, etc, have been brought in district courts all over Japan, with heated argument on both sides; however, starting with the settlement of one case in July 2015, successive settlements with the companies have been made in many district courts, with not inconsiderable amounts in settlement paid by the companies.

23 Product defect**What breaches of duties or other theories can be used to establish product defect?**

Products are defined as defective when they 'lack the safety that the products ordinarily should provide'. While not clearly stipulated in law, it is generally categorised as defect in product design; defect in manufacturing; and defect in instruction and warning.

24 Defect standard and burden of proof**By what standards may a product be deemed defective and who bears the burden of proof? May that burden be shifted to the opposing party? What is the standard of proof?**

A product may be deemed defective when the product lacks the safety that the product ordinarily should provide, taking into account the nature of the product, the ordinarily foreseeable manner of use of the product, the time when the manufacturer, etc, delivered the product and other circumstances concerning the product.

The claimant or the injured party bears the burden of proof; however, in practice, there have been several cases that indicate that the burden of proof of the plaintiffs was, as a matter of fact, reduced in those cases.

25 Possible respondents**Who may be found liable for injuries and damages caused by defective products?**

There are three types of defendants stipulated in the PL Act (article 2, item 3):

- any persons who manufactured, processed, or imported the product in the course of trade;
- any persons who place their name, trade name, trademark or other indication on the product as the manufacturer of such product, or any persons who place their name, etc, on the product such that it misleads others into believing that the aforementioned person is the manufacturer; and
- any persons who place their name, etc, on the product, and by doing so, in light of the manner of the manufacture, processing, importation or sale of the product, and other circumstances, holds themselves out as the substantial manufacturer of the product.

26 Causation**What is the standard by which causation between defect and injury or damages must be established? Who bears the burden and may it be shifted to the opposing party?**

The plaintiff must establish a 'causal relationship' between the alleged defects and the alleged damage, which is the same as the standard for general tort liability and that for breach of contractual obligations.

27 Post-sale duties**What post-sale duties may be imposed on potentially responsible parties and how might liability be imposed upon their breach?**

As stated in question 20, manufacturers are obliged to report to the competent authorities or recall products under the applicable law, each of which varies depending on the type of product.

Limitations and defences

28 Limitation periods**What are the applicable limitation periods?**

Under the PL Act, the limitation period is three years from knowledge of the defect or 10 years from delivery.

Under general tort liability, the limitation period is three years from knowledge of the tortious act or 20 years from the commission of the tortious act.

Under defect liability, the limitation period is one year from knowledge of the defect or 10 years from delivery (this latter limitation period shortened to five years in the case of commercial trading).

Under breach of contractual obligation theory, the limitation period is 10 years (or five years, if commercial trading) from entering into the contract.

If the purchase is made between business enterprises, the buyer is obliged to examine the goods within as short a period as is practicable in the circumstances and notify the seller of the defect. If the buyer fails to perform this obligation, the buyer loses its right to remedies. In addition, even if the defect is latent and not discoverable within a short period of time, the buyer may not bring claims in relation to the seller if the buyer does not discover and notify the defect within six months regardless of negligence of the buyer.

29 State-of-the-art and development risk defence**Is it a defence to a product liability action that the product defect was not discoverable within the limitations of science and technology at the time of distribution? If so, who bears the burden and what is the standard of proof?**

The PL Act stipulates two defences for manufacturers, which are to be established by the defendant:

- when the defect in the product could not have been discovered given the state of scientific or technical knowledge at the time when the manufacturer, etc, delivered the product (defence of development risks). This requirement is considered difficult to meet and it has never been upheld; and
- in the case where the product is used as a component or raw material of another product, and the defect occurred primarily because of compliance with the instructions concerning the design given by the manufacturer of such other product, and the manufacturer, etc, is not negligent with respect to the occurrence of such defect.

30 Compliance with standards or requirements**Is it a defence that the product complied with mandatory (or voluntary) standards or requirements with respect to the alleged defect?**

Compliance with mandatory or industrial standards or requirements is considered to be a factor in adjudging whether the products were defective. However, such compliance will not necessarily lead to a

finding that no defect exists, and there are several precedents whereby the alleged defect was recognised as such in spite of compliance with a certain standard.

31 Other defences**What other defences may be available to a product liability defendant?**

For example, a user's misuse of the products or a third party's intervening act or other events can be defences to the alleged defect or causal relationship.

In addition, the claimant's fault may be taken into account in terms of comparative fault and lead to a reduction in the amount of damages awarded. Insurance benefits or a pre-existing condition of the claimant that contributes to the damage may also be taken into account.

32 Appeals**What appeals are available to the unsuccessful party in the trial court?**

As stated in question 1, the Japanese judicial system comprises a three-tiered court system. Therefore, the losing party at first instance can appeal to the High Court (if the first instance court is the district court) or the district court (if the first instance court is the summary court). In the second instance court, the appellant can make factual allegations.

The party who loses at second instance can make a final appeal or a petition for acceptance of a final appeal to the Supreme Court (if the first instance court was the district court) or the High Court (if the first instance court was a summary court). The grounds for final appeal are very limited, such as that the ruling at second instance contains a misinterpretation of the Constitution, or other violations of the Constitution and suchlike. However, the Supreme Court can, even if there is no valid final appeal ground, accept a petition of final appeal if it considers that the appeal concerns important issues such as interpretation of other laws; therefore, in practice, losing parties file a petition for acceptance of a final appeal together with the petition of final appeal. The final appellate court shall make judgment only in respect of legal arguments and legal issues, and not on factual issues. This means that the final appellate court shall pass legal judgment based on the facts that were found by the previous courts, or, remand the case for reconsideration of the factual matters.

Jurisdiction analysis**33 Status of product liability law and development****Can you characterise the maturity of product liability law in terms of its legal development and utilisation to redress perceived wrongs?**

Although 22 years have passed since the PL Act came into force and the PL Act itself seems widely known to the public and the judiciary seems familiar with this area of law, the number of product liability actions is

NAGASHIMA OHNO & TSUNEMATSU

not exactly many, nor has it been on the increase. However, the PL Act has had a significant impact on business activities, as the establishment and enforcement of the PL Act have encouraged manufacturers to take out product liability insurance or to enhance labelling.

34 Product liability litigation milestones and trends

Have there been any recent noteworthy events or cases that have particularly shaped product liability law? Has there been any change in the frequency or nature of product liability cases launched in the past 12 months?

There are no noteworthy events or cases and there is no indication that either the frequency or nature of product liability cases has changed in the past 12 months.

35 Climate for litigation

Describe the level of 'consumerism' in your country and consumers' knowledge of, and propensity to use, product liability litigation to redress perceived wrongs.

As stated above, there has been no increase in the number of lawsuits. In addition, there has been no increase in the number of consultations by consumers with public consultation desks such as the National Consumer Affairs Centre of Japan (NCAC), consumer centres in each prefecture or bar associations.

On the other hand, the consumer white paper of 2016 issued by the Consumer Affairs Agency states that there has been an increase in proactive consumers, who are inclined to take action such as complaining to businesses if products or services are problematic. In addition, the proportion of consumers who actually consult or lodge complaints with some institutions when harmed has also increased.

36 Efforts to expand product liability or ease claimants' burdens

Describe any developments regarding 'access to justice' that would make product liability more claimant-friendly.

Other than bringing a lawsuit, alternative dispute resolution (ADR) and consulting desks provided by public organisations, such as ADR held by NCAC and other business associations such as the PL Centre for Electrical Home Appliances have been expanding as dispute resolution methods. In addition, legal aid provided by JLSC has started to become applicable to ADR. Those measures enable consumers to have easy access to dispute resolution.

In addition, as stated, while the PL Act itself has not been amended, there have been several precedents that can be interpreted as being authority for the proposition that the burden of proof of plaintiffs has, as a matter of fact, been reduced.
